

## Statistical Appendix

The IMF's Middle East and Central Asia Department (MCD) countries and territories comprise Afghanistan, Algeria, Armenia, Azerbaijan, Bahrain, Djibouti, Egypt, Georgia, Iran, Iraq, Jordan, Kazakhstan, Kuwait, the Kyrgyz Republic, Lebanon, Libya, Mauritania, Morocco, Oman, Pakistan, Qatar, Saudi Arabia, Somalia, Sudan, Syria, Tajikistan, Tunisia, Turkmenistan, the United Arab Emirates, Uzbekistan, the West Bank and Gaza, and Yemen.

The following statistical appendix tables contain data for 31 MCD countries. Data revisions reflect changes in methodology and/or revisions provided by country authorities.

A number of assumptions have been adopted for the projections presented in the *Regional Economic Outlook: Middle East and Central Asia*. It has been assumed that established policies of national authorities will be maintained, that the price of oil<sup>1</sup> will average US\$50.28 a barrel in 2017 and US\$50.17 a barrel in 2018, and that the six-month London interbank offered rate (LIBOR) on U.S.-dollar deposits will average 1.4 percent in 2017 and 1.9 percent in 2018. These are, of course, working hypotheses rather than forecasts, and the uncertainties surrounding them add to the margin of error that would in any event be involved in the projections. The 2017 and 2018 data in the figures and tables are projections. These projections are based on statistical information available through early September 2017.

2011 data for Sudan exclude South Sudan after July 9; data for 2012 onward pertain to the current Sudan.

All data for Syria are excluded for 2011 onward.

All data refer to the calendar years, except for the following countries, which refer to the fiscal years: Afghanistan (March 21 to March 20 until 2011, and December 21 to December 20 thereafter), Iran (March 21 to March 20), Qatar (April to March), and Egypt and Pakistan (July to June) except inflation.

**What's new:** Somalia data is included in MENAP group aggregates.

Data in Tables 7 and 8 relate to the calendar year for all aggregates and countries, except for Iran, for which the Iranian calendar year (beginning on March 21) is used.

Data for West Bank and Gaza are included in all tables except in 3–6, 8, 10, 13, and 14.

In Tables 3, 6, 13, and 14, “oil” includes gas, which is also an important resource in several countries.

REO aggregates are constructed using a variety of weights as appropriate to the series:

- Aggregates for data relating to the domestic economy (Tables 1, 3, 7–8, and 10–17), whether growth rates or ratios, are weighted by GDP valued at purchasing power parities (PPPs) as a share of total MCD or group GDP. Country group aggregates for the growth rates of broad money (Table 9) are weighted by GDP converted to U.S. dollars at market exchange rates (both GDP and exchange rates are averaged over the preceding three years) as a share of MCD or group GDP.
- Aggregates relating to the external economy in nominal terms (Tables 18–20 and 22) are sums of individual country data. Aggregates relating to external economy in percent of GDP (Tables 21 and 23) are weighted by GDP in U.S. dollars as a share of MCD or group GDP in U.S. dollars.
- Aggregates in Tables 2, 4, and 5 are sums of the individual country data.

The following conventions are used in this publication:

- In tables, ellipsis points ( . . . ) indicate “not available,” and 0 or 0.0 indicates “zero” or “negligible.” Minor discrepancies between sums of constituent figures and totals are due to rounding.

<sup>1</sup>Simple average prices of U.K Brent, Dubai, and West Texas Intermediate crude oil.
