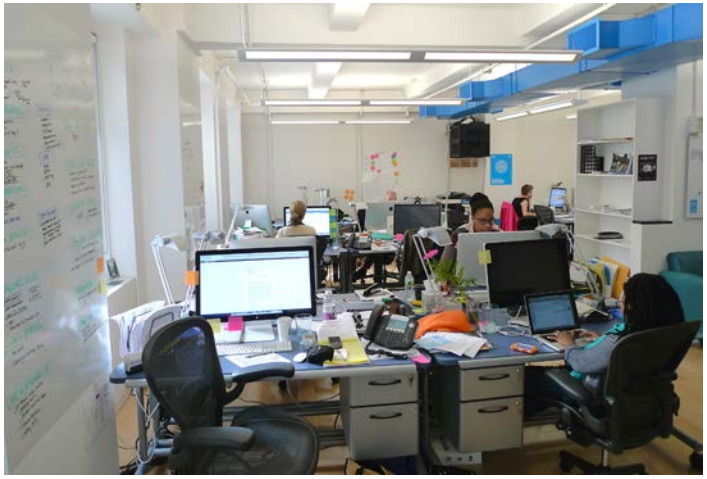
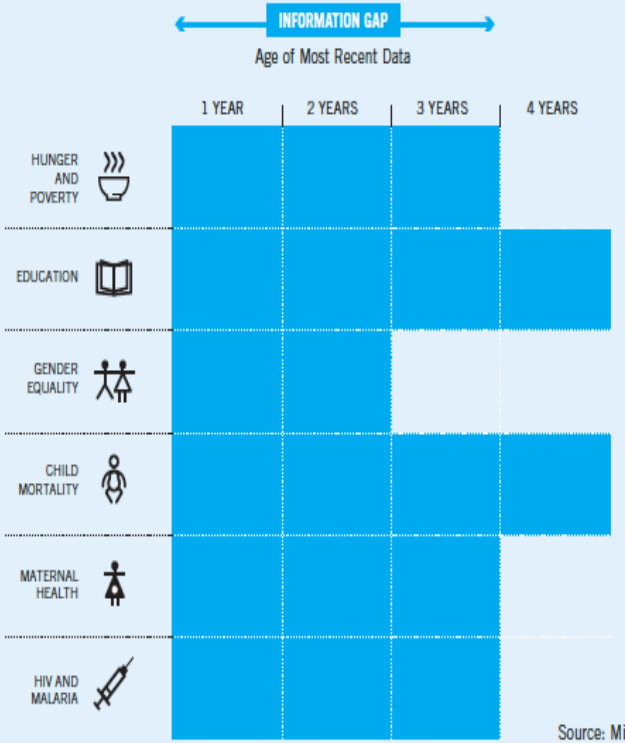
PULSE LABS:
COLLABORATIVE BIG DATA INNOVATION



Why do we need a data revolution?

The Information Gap

Household-level data is so hard to collect that the information being used to track development progress is frequently out of date. We know what happened in the past but not what's happening in the present. Real-time data could strengthen progress indicators by closing the information gap.



Source: Millennium Development Goals Report 2011

It is no longer enough to have processes designed for less disruptive times.

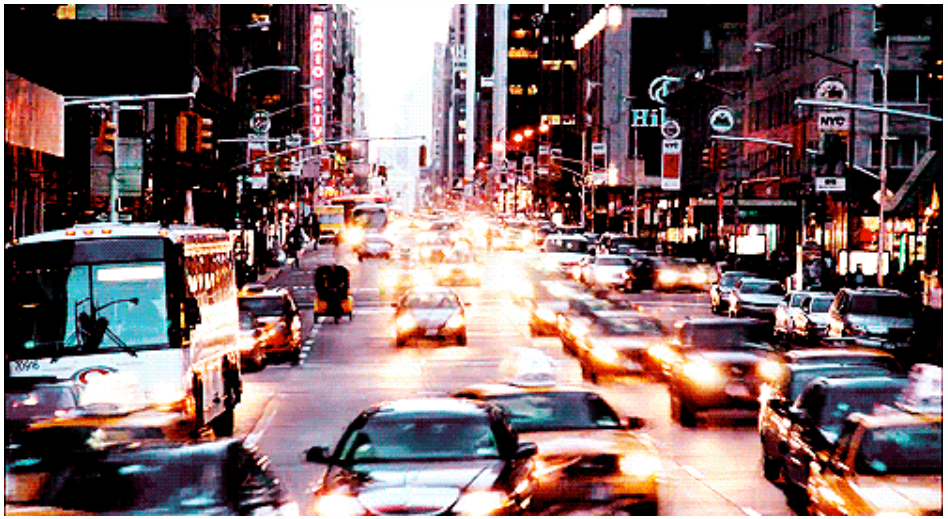
Real-time analytics allows continuous observation of human behavior.

real-time…

Real-time isn’t just faster. It’s different.

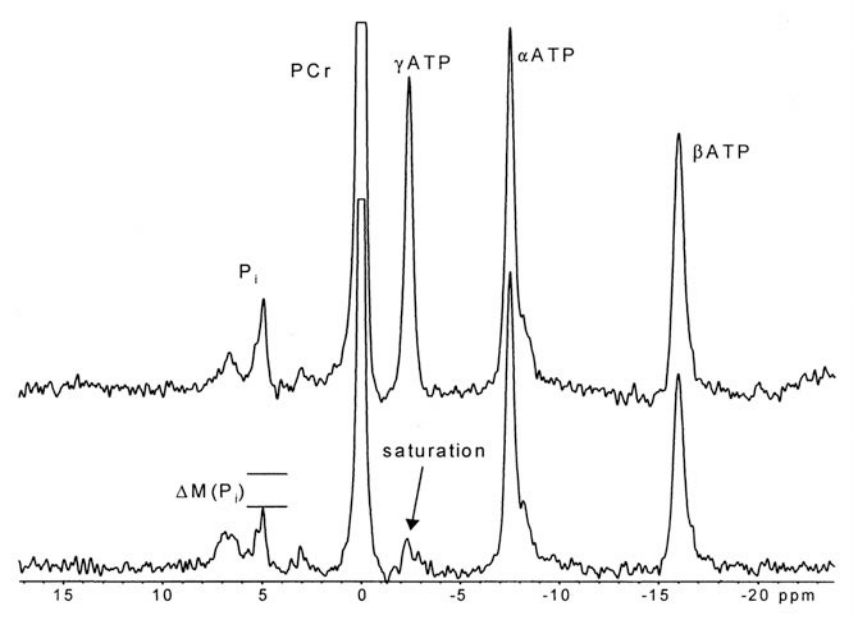
continuous…

survey data



big data

…observation…



Hypothesis:

DIGITAL SERVICES ARE SENSOR NETWORKS FOR MEASURING HUMAN WELLBEING

Data sources which reveal behavior change:

“What People Say”

Online news

Social media

Retail advertising

Radio & TV

“What People Do”

Online search

Mobile phone usage

Transaction records

Postal traffic

GLOBAL PULSE

OUR PRIVACY & DATA PROTECTION PRINCIPLES

We do not access data containing Personally Identifiable Information on any individual, without a freely given, unambiguous and informed consent

We never access the content of private communications

We never attempt to re-identify de-identified data

We ensure appropriate technical and administrative safeguards are in place to prevent unauthorized disclosure or breach of data

We access, analyze, store, transmit or otherwise use only data that has been lawfully and properly obtained from partners

We design, carry out, report and document our activities accurately, transparently and objectively

We employ even stricter standards of care while conducting research among vulnerable populations and persons at risk, children and young people

We perform due diligence when selecting data or service provider partners and ensure their activities comply with the United Nations' global mandate

We ensure that our research partners are acting in compliance with relevant law and privacy and data protection standards

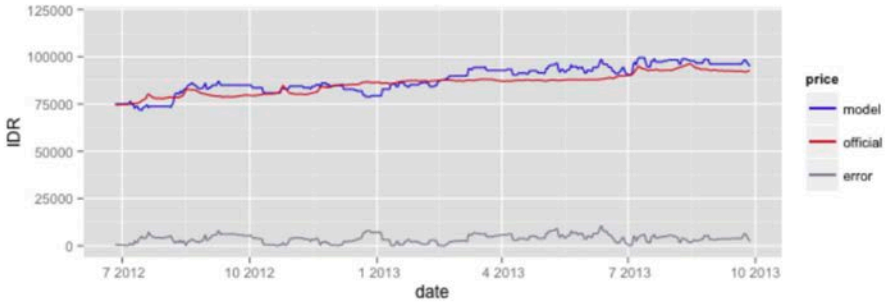
Program: Food & Agriculture

Project: *Nowcasting food prices via Indonesian Twitter*

Partners: WFP, BAPPENAS, University of Seoul

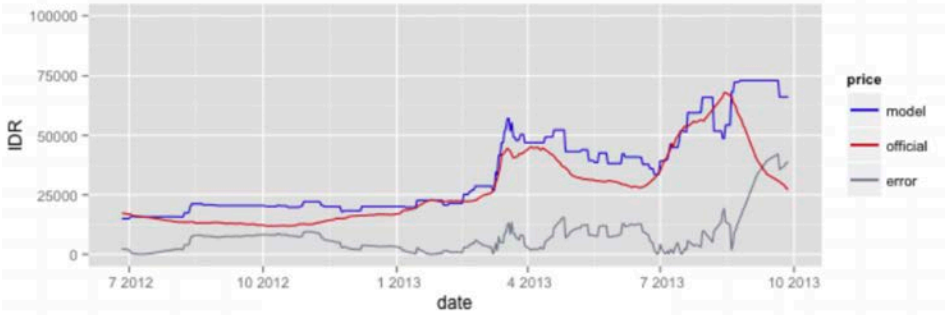
BEEF: The official beef price was relatively stable for the timeframe analysed, and the long-term price trend was accurately modeled (nowcasted prices remained close to real prices throughout the timeframe).

14,473 tweets contained price quotes on beef.



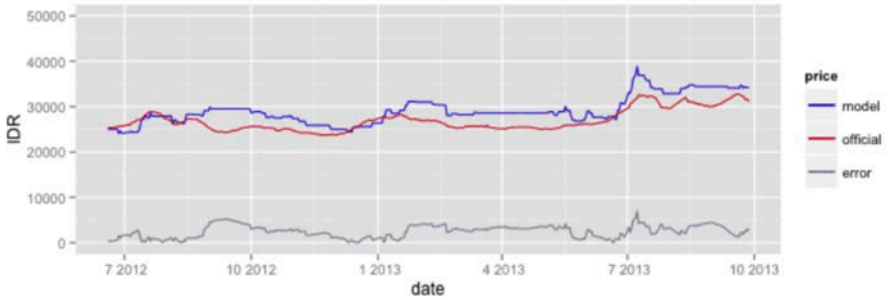
ONION: Onion ("bawang") fluctuated the most of the four commodities. The model effectively tracked price variation around April 2013, but due to the low number of tweets containing price quotes in August did not provide a successful price proxy.

1,954 tweets contained price quotes on onions.



CHICKEN: The tool successfully modeled the price of chicken ("daging ayam") with significant correlation for the duration.

5,223 tweets contained price quotes on chicken.



COMMODITY	PEARSON CORRELATION COEFFICIENT
Beef	0.87
Chicken	0.81
Onion	0.85

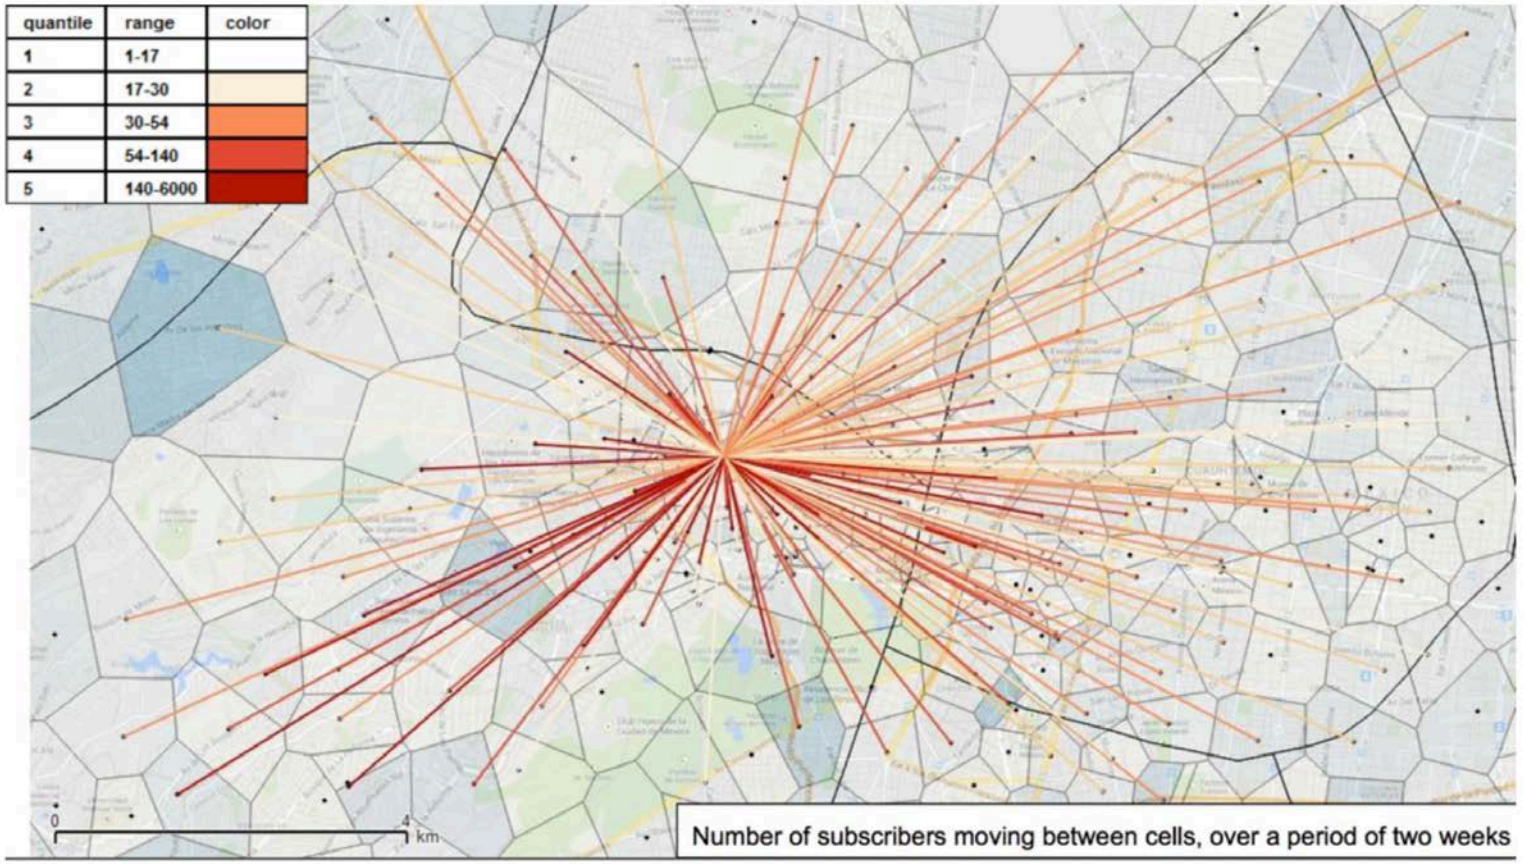
Program: Privacy

Project: Data privacy risk and the limits of decision making

Partners: MIT

Mapping movements: Record which areas people move between by recording locations of successive calls



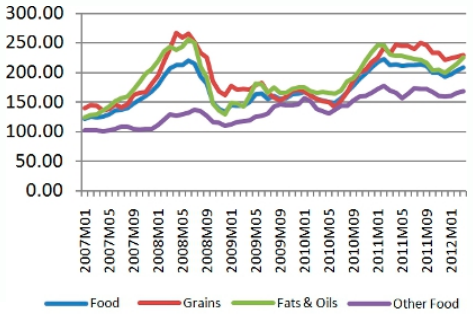
Speech-to-Text Radio Mining

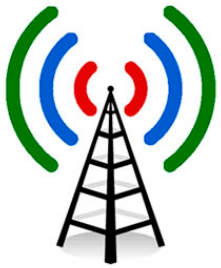
Toolkit

Speech-to-text engine + near real-time analysis of live public FM radio conversation in Uganda

Features

location, volume, mood, associated topics, anomaly detection



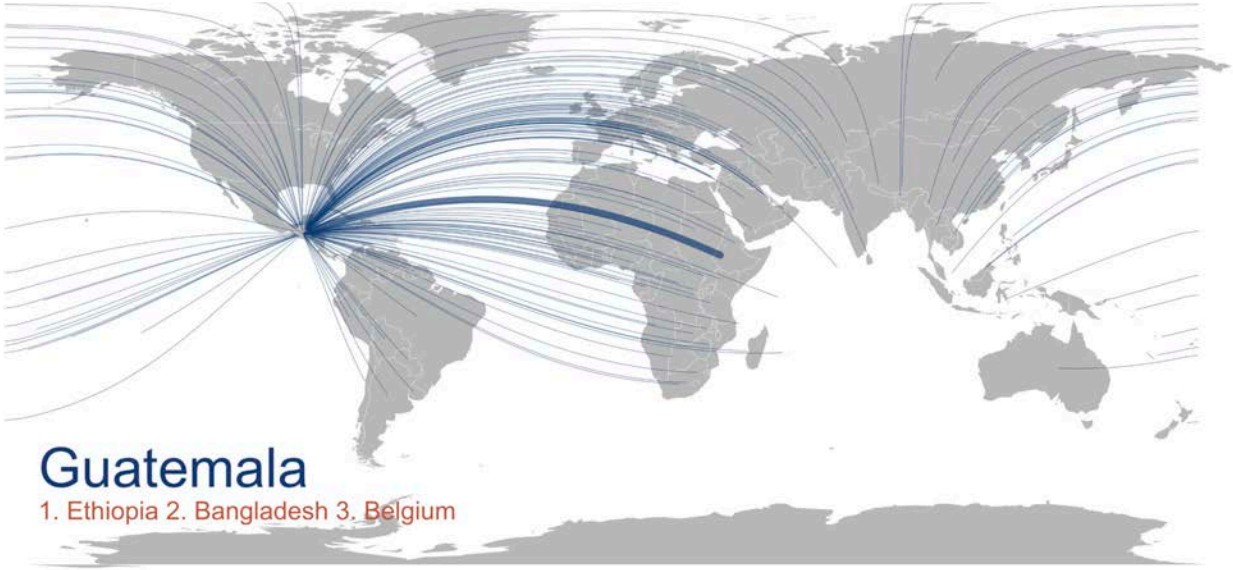


Record Audio → Identify Language (Luganda, Acholi) → Convert Speech to Text Transcript → Filter for Topics (health, food prices, jobs, crops, etc.) → Analyze volume, mood, associated topics → Visualize on dashboard

PARTNERS: Leiden University, Makerere University, Sheffield University

Postal Flows

UPU UNIVERSAL POSTAL UNION



GLOBAL PULSE

Big Data for Development: 3 Opportunities

1. **Enhanced Early Warning:** Earlier detection of anomalies and events allows rapid response to crises.

1. **Real-Time Awareness:** Real-time trend analysis of population activities and dynamics can inform the design and targeting of programmes and policies.

1. **Real-time Evaluation:** Real-time feedback from citizens, and measurement of behavior change, allows for adaptive course corrections in programmes and policies.

GLOBAL PULSE

Advantages of using big data

New insights

New sources provide data historically unavailable, yielding new insights

Cost of data collection

Digital systems can be significantly less resource intensive than traditional statistics

Risk of data collection

Allows remote analysis, allowing data to be tracked in risky or unstable locations

Speed of response

Response can significantly improve on lag in traditional statistics

Adaptive execution

Continuous real-time feedback allows strategy to evolve with changing realities on the ground

2014-2015 Track 1 Innovation Programs
