STATISTICAL APPENDIX

he statistical appendix presents historical data, as well as projections. It comprises four sections: Assumptions, Data and Conventions, Classification of Countries, and Statistical Tables.

The assumptions underlying the estimates and projections for 2002–03 and the medium-term scenario for 2004–07 are summarized in the first section. The second section provides a general description of the data, and of the conventions used for calculating country group composites. The classification of countries in the various groups presented in the *World Economic Outlook* is summarized in the third section.

The last, and main, section comprises the statistical tables. Data in these tables have been compiled on the basis of information available through early September 2002. The figures for 2002 and beyond are shown with the same degree of precision as the historical figures solely for convenience; since they are projections, the same degree of accuracy is not to be inferred.

Assumptions

Real effective *exchange rates* for the advanced economies are assumed to remain constant at their average levels during the period July 19–August 16, 2002. For 2002 and 2003, these assumptions imply average U.S. dollar/SDR conversion rates of 1.293 and 1.324, U.S. dollar/euro conversion rates of 0.94 and 0.98, and U.S. dollar/yen conversion rates of 124.0 and 117.2.

Established *policies* of national authorities are assumed to be maintained. The more specific policy assumptions underlying the projections for selected advanced economies are described in Box A1.

It is assumed that the *price of oil* will average \$24.40 a barrel in 2002 and \$24.20 a barrel in 2003.

With regard to *interest rates*, it is assumed that the London interbank offered rate (LIBOR) on six-month U.S. dollar deposits will average 2.1 percent in 2002 and 3.2 percent in 2003; that the three-month certificate of deposit rate in Japan will average 0.1 percent in 2002 and in 2003; and that the three-month interbank deposit rate for the euro will average 3.4 percent in 2002 and 3.8 percent in 2003.

With respect to *introduction of the euro*, on December 31, 1998 the Council of the European Union decided that, effective January 1, 1999, the irrevocably fixed conversion rates between the euro and currencies of the member states adopting the euro are:

| 1 euro = | 13.7603 | Austrian schillings |
|----------|----------|----------------------|
| = | 40.3399 | Belgian francs |
| = | 1.95583 | Deutsche mark |
| = | 5.94573 | Finnish markkaa |
| = | 6.55957 | French francs |
| = | 340.750 | Greek drachmal |
| = | 0.787564 | Irish pound |
| = | 1,936.27 | Italian lire |
| = | 40.3399 | Luxembourg francs |
| = | 2.20371 | Netherlands guilders |
| = | 200.482 | Portuguese escudos |
| = | 166.386 | Spanish pesetas |

See Box 5.4 in the October 1998 *World Economic Outlook* for details on how the conversion rates were established.

Data and Conventions

Data and projections for 182 countries form the statistical basis for the World Economic Outlook

¹The conversion rate for Greece was established prior to inclusion in the euro area on January 1, 2001.

Box A1. Economic Policy Assumptions Underlying the Projections for Selected Advanced Economies

The short-term *fiscal policy assumptions* used in the World Economic Outlook are based on officially announced budgets, adjusted for differences between the national authorities and the IMF staff regarding macroeconomic assumptions and projected fiscal outturns. The medium-term fiscal projections incorporate policy measures that are judged likely to be implemented. In cases where the IMF staff has insufficient information to assess the authorities' budget intentions and prospects for policy implementation, an unchanged structural primary balance is assumed, unless otherwise indicated. Specific assumptions used in some of the advanced economies follow (see also Tables 14-16 in the Statistical Appendix for data on fiscal and structural balances).1

United States. The fiscal projections are based on the 2003 mid-session review of the Administration's budget (July 2002), adjusted for Congressional Budget Office's baseline revisions (August 2002) and the IMF staff's macroeconomic and budget assumptions.

Japan. The projections take into account the initial FY2002 budget, the first supplementary budget of November 2001 which included additional measures of about ¥3 trillion, and the second supplementary budget of February 2002 with measures of ¥4 trillion, of which ¥2.5 trillion is central government spending and ¥1.5 trillion is local government spending.

¹The output gap is actual less potential output, as a percent of potential output. Structural balances are expressed as a percent of potential output. The structural budget balance is the budgetary position that would be observed if the level of actual output coincided with potential output. Changes in the structural budget balance consequently include effects of temporary fiscal measures, the impact of fluctuations in interest rates and debt-service costs, and other non-cyclical fluctuations in the budget balance. The computations of structural budget balances are based on IMF staff estimates of potential GDP and revenue and expenditure elasticities (see the October 1993 World Economic Outlook, Annex I). Net debt is defined as gross debt less financial assets of the general government, which include assets held by the social security insurance system. Estimates of the output gap and of the structural balance are subject to significant margins of uncertainty.

Germany. Fiscal projections for 2002–05 are based on the national authorities' updated Stability Program of December 2001, as adjusted for (i) the IMF staff's updated macroeconomic scenario; (ii) differences between the Stability Program's estimates for fiscal developments in 2001 and the outcome in 2001; (iii) the new expenditure paths agreed under the national stability pact between the federal and local governments in May 2002, as reflected in the updated medium-term fiscal projections prepared by the *Finanzplanungsrat*—the advisory intergovernmental council that coordinates fiscal policy between the Bund and Länder-in June 2002; and (iv) recently announced changes to expenditure and taxes that are related to flood damage repair.

France. The IMF staff has assumed that, other than the tax cuts already embodied in the 2002 supplementary budget, the government's intention to reduce the tax burden by €30 billion will result in cuts spread over the 2004–07 period. Expenditures are assumed to grow at an annual real rate of 1.3 percent, as set in the latest available Stability Program (2003–05) except in 2003, when overruns in health care spending are projected to result in faster overall expenditure growth. Projections are based on the staff's macroeconomic assumptions.

Italy. Fiscal projections for 2003 and beyond are based on the authorities' targets as published in their medium term economic program released in July 2002, adjusted for differences in macroeconomic assumptions.

United Kingdom. The fiscal projections are based on the April 2002 budget report. Additionally, the projections incorporate the most recent statistical releases from the Office for National Statistics, including provisional budgetary outturns throughout May 2002. The main difference with respect to the official budgetary projections is that the staff projections are based on potential growth of 2.6 percent rather than the 2.5 percent underlying official projections. They also include an adjustment for the proceeds of the recent UMTS license auction (about 2.4 percent of GDP)

received in fiscal year 2000/01 to conform to the Eurostat accounting guidelines. These proceeds are not included in the computation of the structural balance.

Canada. The fiscal outlook assumes tax and expenditure policies in line with those outlined in the government's 2001 budget, announced in December 2001, adjusted for the staff's economic projections. Over the medium term, the staff assumes that the federal government budget will be in surplus by an amount equivalent to the contingency reserve in the budget. The staff assumes that the contingency reserve is restored to its pre-2001 budget level of Can\$3 billion after FY 2003/04. The consolidated fiscal position for the provinces is assumed to evolve in line with their stated medium-term targets.

Australia. The fiscal projections through the fiscal year 2005/06 are based on the 2002/03 budget, which was published by the Australian Treasury in May 2002. For the remainder of the projection period, the IMF staff assumes unchanged policies.

Netherlands. Projections for 2002 reflect the 2002 budget adjusted for the IMF staff's macroeconomic projections. For 2003–06, the forecasts are based on the authorities' multiyear framework as laid out in the new cabinet's coalition agreement adjusted for the staff's macroeconomic projections. The framework in based on a binding multiyear ceiling on real expenditure.

Portugal. The fiscal projections for 2002 take into account the authorities' revised estimates for 2001, assume that 2002 fiscal measures yield the effects estimated by the authorities, and adjust revenue projections for differences between the authorities' and staff's macroeconomic framework. Fiscal projections for 2003–07 assume a constant structural primary balance.

Spain. Fiscal projections through 2005 are based on the policies outlined in the national authorities' updated Stability Program of December 2001. Projections for subsequent years assume no significant changes in those policies.

Sweden. Projections for 2002 are based on the central government budget outturn for the first

quarter of 2002, and the policies and projections (for general government) underlying the Spring Budget Bill published in April 2002. The projections also take account of the authorities' medium-term fiscal objective of a general government surplus of 2 percent of GDP over the economic cycle, the Ministry of Finance's medium-term fiscal projections for 2003–04, and the nominal ceilings on central government expenditures for the same period.

Switzerland. Projections for 2002 are based on the official budget plans, including supplementary budgets, and preliminary figures on the budget outturn. The projections for 2003–05 are based on official budget plans that include measures to strengthen the finances of social security. Beyond 2005, the general government's structural balance is assumed to remain unchanged.

Monetary policy assumptions are based on the established policy framework in each country. In most cases, this implies a nonaccommodative stance over the business cycle: official interest rates will therefore increase when economic indicators suggest that prospective inflation will rise above its acceptable rate or range; and they will decrease when indicators suggest that prospective inflation will not exceed the acceptable rate or range, that prospective output growth is below its potential rate, and that the margin of slack in the economy is significant. On this basis, the projected path for the London interbank offered rate (LIBOR) on six-month U.S. dollar deposits—2.1 percent on average in 2002 and 3.2 percent in 2003and the federal funds target rate are broadly consistent with market expectations as of early September 2002. The interest rate on six-month Japanese ven deposits is assumed to average 0.1 percent in 2002 and 0.1 percent in 2003, with the current monetary policy framework being maintained. The rate on six-month euro deposits is assumed to average 3.4 percent in 2002 and 3.8 in 2003. Changes in interest rate assumptions compared with the April 2002 World Economic Outlook are summarized in Table 1.1.

(the World Economic Outlook database). The data are maintained jointly by the IMF's Research Department and area departments, with the latter regularly updating country projections based on consistent global assumptions.

Although national statistical agencies are the ultimate providers of historical data and definitions, international organizations are also involved in statistical issues, with the objective of harmonizing methodologies for the national compilation of statistics, including the analytical frameworks, concepts, definitions, classifications, and valuation procedures used in the production of economic statistics. The World Economic Outlook database reflects information from both national source agencies and international organizations.

The completion in 1993 of the comprehensive revision of the standardized System of National Accounts 1993 (SNA) and the IMF's Balance of Payments Manual (BPM) represented important improvements in the standards of economic statistics and analysis.2 The IMF was actively involved in both projects, particularly the new Balance of Payments Manual, which reflects the IMF's special interest in countries' external positions. Key changes introduced with the new Manual were summarized in Box 13 of the May 1994 World Economic Outlook. The process of adapting country balance of payments data to the definitions of the new BPM began with the May 1995 World Economic Outlook. However, full concordance with the BPM is ultimately dependent on the provision by national statistical compilers of revised country data, and hence the World Economic Outlook estimates are still only partially adapted to the BPM.

The members of the European Union have recently adopted a harmonized system for the

compilation of the national accounts, referred to as ESA 1995. All national accounts data from 1995 onward are now presented on the basis of the new system. Revision by national authorities of data prior to 1995 to conform to the new system has progressed, but has in some cases not been completed. In such cases, historical *World Economic Outlook* data have been carefully adjusted to avoid breaks in the series. Users of EU national accounts data prior to 1995 should nevertheless exercise caution until such time as the revision of historical data by national statistical agencies has been fully completed. See Box 1.2, *Revisions in National Accounts Methodologies*, in the May 2000 *World Economic Outlook*.

Composite data for country groups in the World Economic Outlook are either sums or weighted averages of data for individual countries. Unless otherwise indicated, multiyear averages of growth rates are expressed as compound annual rates of change. Arithmetically weighted averages are used for all data except inflation and money growth for the developing and transition country groups, for which geometric averages are used. The following conventions apply.

- Country group composites for exchange rates, interest rates, and the growth rates of monetary aggregates are weighted by GDP converted to U.S. dollars at market exchange rates (averaged over the preceding three years) as a share of group GDP.
- Composites for other data relating to the domestic economy, whether growth rates or ratios, are weighted by GDP valued at purchasing power parities (PPPs) as a share of total world or group GDP.³
- Composites for data relating to the domestic economy for the euro area (12 member countries throughout the entire period unless oth-

²Commission of the European Communities, International Monetary Fund, Organization for Economic Cooperation and Development, United Nations, and World Bank, *System of National Accounts 1993* (Brussels/Luxembourg, New York, Paris, and Washington, 1993); and International Monetary Fund, *Balance of Payments Manual, Fifth Edition* (Washington: IMF, 1993).

³See Box A1 of the May 2000 World Economic Outlook for a summary of the revised PPP-based weights and Annex IV of the May 1993 World Economic Outlook. See also Anne Marie Gulde and Marianne Schulze-Ghattas, "Purchasing Power Parity Based Weights for the World Economic Outlook," in Staff Studies for the World Economic Outlook (International Monetary Fund, December 1993), pp. 106–23.

- erwise noted) are aggregates of national source data using weights based on 1995 ECU exchange rates.
- Composite unemployment rates and employment growth are weighted by labor force as a share of group labor force.
- Composites relating to the external economy are sums of individual country data after conversion to U.S. dollars at the average market exchange rates in the years indicated for balance of payments data and at end-of-year market exchange rates for debt denominated in currencies other than U.S. dollars. Composites of changes in foreign trade volumes and prices, however, are arithmetic averages of percentage changes for individual countries weighted by the U.S. dollar value of exports or imports as a share of total world or group exports or imports (in the preceding year).

For central and eastern European countries, external transactions in nonconvertible currencies (through 1990) are converted to U.S. dollars at the implicit U.S. dollar/ruble conversion rates obtained from each country's national currency exchange rate for the U.S. dollar and for the ruble.

Classification of Countries

Summary of the Country Classification

The country classification in the *World Economic Outlook* divides the world into three major groups: advanced economies, developing countries, and countries in transition.⁴ Rather than being based on strict criteria, economic or otherwise, this classification has evolved over time with the objective of facilitating analysis by providing a reasonably meaningful organization of data. A few countries are presently not included in these groups, either because they are not IMF members, and their economies are not monitored by the IMF, or because databases

have not yet been compiled. Cuba and the Democratic People's Republic of Korea are examples of countries that are not IMF members, whereas San Marino, among the advanced economies, is an example of an economy for which a database has not been completed. It should also be noted that, owing to a lack of data, only three of the former republics of the dissolved Socialist Federal Republic of Yugoslavia (Croatia, the former Yugoslav Republic of Macedonia, and Slovenia) are included in the group composites for countries in transition.

Each of the three main country groups is further divided into a number of subgroups. Among the advanced economies, the seven largest in terms of GDP, collectively referred to as the major advanced countries, are distinguished as a subgroup, and so are the 15 current members of the European Union, the 12 members of the euro area, and the four newly industrialized Asian economies. The developing countries are classified by region, as well as into a number of analytical and other groups. A regional breakdown is also used for the classification of the countries in transition. Table A provides an overview of these standard groups in the World Economic Outlook, showing the number of countries in each group and the average 2001 shares of groups in aggregate PPPvalued GDP, total exports of goods and services, and population.

General Features and Compositions of Groups in the World Economic Outlook Classification

Advanced Economies

The 29 advanced economies are listed in Table B. The seven largest in terms of GDP—the United States, Japan, Germany, France, Italy, the United Kingdom, and Canada—constitute the subgroup of *major advanced economies*, often

⁴As used here, the term "country" does not in all cases refer to a territorial entity that is a state as understood by international law and practice. It also covers some territorial entities that are not states, but for which statistical data are maintained on a separate and independent basis.

Table A. Classification by *World Economic Outlook* Groups and Their Shares in Aggregate GDP, Exports of Goods and Services, and Population, 2001¹ (Percent of total for group or world)

¹⁰n July 1, 1997, Hong Kong was returned to the People's Republic of China and became a Special Administrative Region of China.

referred to as the Group of Seven (G-7) countries. The current members of the European Union (15 countries), the euro area (12 countries), and the newly industrialized Asian economies are also distinguished as subgroups. Composite data shown in the tables for the European Union and the euro area cover the current members for all years, even though the membership has increased over time.

In 1991 and subsequent years, data for *Germany* refer to west Germany *and* the eastern Länder (i.e., the former German Democratic Republic). Before 1991, economic data are not available on a unified basis or in a consistent manner. Hence, in tables featuring data expressed as annual percent change, these apply to west Germany in years up to and including 1991, but to unified Germany from 1992 onward. In general, data on national accounts and domestic economic and financial activity through 1990 cover west Germany only, whereas data for the central government and balance of payments apply to west Germany through June 1990 and to unified Germany thereafter.

Developing Countries

The group of developing countries (125 countries) includes all countries that are not classified as advanced economies or as countries in

transition, together with a few dependent territories for which adequate statistics are available.

The regional breakdowns of developing countries in the World Economic Outlook conform to the IMF's International Financial Statistics (IFS) classification—Africa, Asia, Europe, Middle East, and Western Hemisphere—with one important exception. Because all of the non-advanced countries in Europe except Malta and Turkey are included in the group of countries in transition, the World Economic Outlook classification places these two countries in a combined *Middle* East and Turkey region. In both classifications, Egypt and the Libyan Arab Jamahiriya are included in this region, not in Africa. Three additional regional groupings-two of them constituting part of Africa and one a subgroup of Asia—are included in the World Economic Outlook because of their analytical significance. These are sub-Sahara, sub-Sahara excluding Nigeria and South Africa, and Asia excluding China and India.

The developing countries are also classified according to *analytical criteria* and into *other groups*. The analytical criteria reflect countries' composition of export earnings and other income from abroad, a distinction between net creditor and net debtor countries, and, for the net debtor countries, financial criteria based on external financing source and experience with external debt servicing. Included as

Table C. Developing Countries by Region and Main Source of Export Earnings

| | Fuel | Nonfuel, Of Which Primary Products | | Fuel | Nonfuel, Of Which Primary Products |

| North Africa | Algeria | Namibia Niger Somalia Sudan Swaziland Tanzania Togo Zambia Zimbabwe | Western Hemisphere | Trinidad and Tobago Venezuela | Belize Bolivia Chile Guyana Honduras Nicaragua Paraguay Peru Suriname |

"other groups" are currently the heavily indebted poor countries (HIPCs), and Middle East and north Africa (MENA). The detailed composition of developing countries in the regional, analytical, and other groups is shown in Tables C through E.

The first analytical criterion, by *source of export earnings*, distinguishes between categories: *fuel* (Standard International Trade Classification—SITC 3) and nonfuel and then focuses on *nonfuel primary products* (SITC 0, 1, 2, 4, and 68).

The financial criteria focus on *net creditor* and *net debtor countries* which are differentiated on the basis of two additional financial criteria: by

official external financing and by experience with debt servicing.⁵

The *other groups* of developing countries (see Table E) constitute the HIPCs and MENA countries. The first group comprises 40 of the countries (all except Nigeria) considered by the IMF and the World Bank for their debt initiative, known as the HIPC Initiative.⁶ Middle East and north Africa, also referred to as the MENA countries, is a *World Economic Outlook* group, whose composition straddles the Africa and Middle East and Europe regions. It is defined as the Arab League countries plus the Islamic Republic of Iran.

⁵During 1994–98, 55 countries incurred external payments arrears or entered into official or commercial bank debtrescheduling agreements. This group of countries is referred to as *countries with arrears and/or rescheduling during* 1994–98.

⁶See David Andrews, Anthony R. Boote, Syed S. Rizavi, and Sukwinder Singh, *Debt Relief for Low-Income Countries: The Enhanced HIPC Initiative*, IMF Pamphlet Series, No. 51 (Washington: International Monetary Fund, November 1999)

Countries in Transition

The group of countries in transition (29 countries) is divided into two regional subgroups: central and eastern Europe, and the Commonwealth of Independent States and Mongolia. The detailed country composition is shown in Table F.

One common characteristic of these countries is the transitional state of their economies from a centrally administered system to one based on market principles. Another is that this transition involves the transformation of sizable industrial sectors whose capital stocks have

proven largely obsolete. Although several other countries are also "in transition" from partially command-based economic systems toward market-based systems (including China, Cambodia, the Lao People's Democratic Republic, Vietnam, and a number of African countries), most of these are largely rural, low-income economies for whom the principal challenge is one of economic development. These countries are therefore classified in the developing country group rather than in the group of countries in transition.

¹Data for some countries refer to real net material product (NMP) or are estimates based on NMP. For many countries, figures for recent years are IMF staff estimates. The figures should be interpreted only as indicative of broad orders of magnitude because reliable, comparable data are not generally available. In particular, the growth of output of new private enterprises of the informal economy is not fully reflected in the recent figures.

¹Percent of GDP.

²Percent of potential GDP.

³M2, defined as M1 plus quasi-money, except for Japan, for which the data are based on M2 plus certificates of deposit (CDs). Quasi-money is essentially private term deposits and other notice deposits. The United States also includes money market mutual fund balances, money market deposit accounts, overnight repurchase agreements, and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks. For Japan, M2 plus CDs is currency in circulation plus total private and public sector deposits and installments of Sogo Bank plus CDs. For the euro area, M3 is composed of M2 plus marketable instruments held by euro area residents, which comprise repurchase agreements, money market fund shares/units, money market paper, and debt securities up to two years.

⁴Excludes Greece prior to 2001.

⁵For the United States, three-month treasury bills; for Japan, three-month certificates of deposit; for the euro area, a weighted average of national three-month money market interest rates through 1998 and three-month EURIBOR thereafter; for LIBOR, London interbank offered rate on six-month U.S. dollar deposits.

¹On a national income accounts basis except as indicated in footnotes. See Box A1 for a summary of the policy assumptions underlying the projections. ²Adjusted for valuation changes of the foreign exchange stabilization fund.

^{**}Based on ESA95 methodology, according to which swap income is not included. Data on swap income are not yet available for other countries in the European Union.

4Data cover the consolidated centeral government including the social security funds but excluding privatization.

5Data exclude net advances (primarily privatization receipts and net policy-related lending).

⁶Data from 1992 onward are on an accrual basis and are not strictly comparable with previous cash-based data.

⁷Data are on a budget basis.

⁸Data are on a national income basis and exclude social security transactions. ⁹Data are on an administrative basis and exclude social security transactions.

¹On a national income accounts basis. The structural budget position is defined as the actual budget deficit (or surplus) less the effects of cyclical deviations of output from potential output. Because of the margin of uncertainty that attaches to estimates of cyclical gaps and to tax and expenditure elasticities with respect to national income, indicators of structural budget positions should be interpreted as broad orders of magnitude. Moreover, it is important to note that changes in structural budget balances are not necessarily attributable to policy changes but may reflect the built-in momentum of existing expenditure programs. In the period beyond that for which specific consolidation programs exist, it is assumed that the structural deficit remains unchanged.

²The estimate of the fiscal impulse for 1995 is affected by the assumption by the federal government of the debt of the Treuhandanstalt and various other agencies, which were formerly held outside the general government sector. At the public sector level, there would be an estimated withdrawal of fiscal impulse amounting to just over 1 percent of GDP.

³Excludes one-off receipts from the sale of mobile telephone licenses equivalent to 2.5 percent of GDP in 2000 for Germany, 0.1 percent of GDP in 2001 and 2002 for France, 1.2 percent of GDP in 2000 for Italy, 2.4 percent of GDP in 2000 for the United Kingdom, 0.1 percent of GDP in 2000 for Spain, 0.7 percent of GDP in 2000 for Netherlands, 0.2 percent of GDP in 2001 for Belgium, and 0.4 percent of GDP in 2000 for Austria, 0.3 percent of GDP in 2000 for Portugal, and 0.2 percent of GDP in 2002 for Ireland. Also excludes one-off receipts from sizable asset transactions.

Excludes oil.

⁵Excludes commonwealth government privatization receipts.

⁶Excludes privatization proceeds.

⁷Excludes Luxembourg

¹Based on end-of-period data except for Japan, which is based on monthly averages.

²M1 except for the United Kingdom, where M0 is used here as a measure of narrow money; it comprises notes in circulation plus bankers' operational deposits. M1 is generally currency in circulation plus private demand deposits. In addition, the United States includes traveler's checks of nonbank issues and other checkable deposits and excludes private sector float and demand deposits of banks. Japan includes government demand deposits and excludes private sector float.

³Excludes Greece prior to 2001.

⁴M2, defined as M1 plus quasi-money, except for Japan, and the United Kingdom, for which the data are based on M2 plus certificates of deposit (CDs), and M4, respectively. Quasi-money is essentially private term deposits and other notice deposits. The United States also includes money market mutual fund balances, money market deposit accounts, overnight repurchase agreements, and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks. For Japan, M2 plus CDs is currency in circulation plus total private and public sector deposits and installments of Sogo Bank plus CDs. For the United Kingdom, M4 is composed of non-interest-bearing M1, private sector interest-bearing sterling sight bank deposits, private sector sterling time bank deposits, private sector holdings of sterling bank CDs, private sector holdings of building society shares and deposits, and sterling CDs less building society holdings of bank deposits and bank CDs and notes and coins. For the euro area, M3 is composed of M2 plus marketable instruments held by euro area residents, which comprise repurchase agreements, money market fund shares/units, money market paper, and debt securities up to two years.

¹Annual data are end of period. For the United States, federal funds rate; for Japan, overnight call rate; for the euro area, main refinancing rate; for the United Kingdom, base lending rate; and for Canada, overnight money market financing rate.

²Excludes Greece prior to 2001.

³Annual data are period average. For the United States, three-month treasury bill market bid yield at constant maturity; for Japan, three-month bond yield with repurchase agreement; for the euro area, a weighted average of national three-month money market interest rates through 1998 and three-month EURIBOR thereafter; for the United Kingdom, three-month London interbank offered rate; and for Canada, three-month treasury bill yield.

⁴Annual data are period average. For the United States, ¹O-year treasury bond yield at constant maturity; for Japan, ¹O-year government bond yield; for euro area, a weighted average of national ¹O-year government bond yields through ¹O-year euro bond yield thereafter; for the United Kingdom, ¹O-year government bond yield; and for Canada, government bond yield of ¹O years and over.

¹Average exchange rates for the period July 19-August 16, 2002. See "Assumptions" in the Introduction to the Statistical Appendix.
²In nominal effective terms. Average July 1-16, 2002 rates compared with July 19-August 16, 2002 rates.
³Defined as the ratio, in common currency, of the normalized unit labor costs in the manufacturing sector to the weighted average of those of its industrial country trading partners, using 1989–91 trade weights.

⁴A synthetic euro for the period prior to January 1, 1999 is used in the calculation of real effective exchange rates for the euro. See Box 5.5 in the *World Economic Outlook*, October 1998.

¹Average of annual percent change for world exports and imports. The estimates of world trade comprise, in addition to trade of advanced economies and developing countries (which is summarized in the table), trade of countries in transition.

²As represented, respectively, by the export unit value index for the manufactures of the advanced economies; the average of U.K. Brent, Dubai, and West Texas Intermediate crude oil spot prices; and the average of world market prices for nonfuel primary commodities weighted by their 1987–89 shares in world commodity exports.

¹Standard presentation in accordance with the 5th edition of the International Monetary Fund's Balance of Payments Manual (1993).

²Comprises capital transfers—including debt forgiveness—and acquisition/disposal of nonproduced, nonfinancial assets.

³Comprise net direct investment, net portfolio investment, and other long- and short-term net investment flows, including official and private borrowing. In the standard balance of payments presentation above, total net capital flows are equal to the balance on financial account minus the change in reserve assets.

⁴Because of limitations on the data coverage for net official flows, the residually derived data for net private flows may include some official flows.

⁵As defined in the World Economic Outlook (see footnote 6). It should be noted that there is no generally accepted standard definition of external financing.

Defined as the sum of—with opposite sign—the goods and services balance, net income and current transfers, direct investment abroad, the change in reserve assets, the net acquisition of other assets (such as recorded private portfolio assets, export credit, and the collateral for debt-reduction operations), and the net errors and omissions. Thus, net external financing, according to the definition adopted in the World Economic Outlook, measures the total amount required to finance the current account, direct investment outflows, net reserve transactions (often at the discretion of the monetary authorities), the net acquisition of nonreserve external assets, and the net transactions underlying the errors and omissions (not infrequently reflecting capital flight).

⁷Including other transactions on capital account.

⁸Debt-creating foreign direct investment liabilities are not included.

⁹Net disbursement of long- and short-term credits, including exceptional financing, by both official and private creditors.

¹⁰Net disbursement by official creditors, based on directly reported flows and flows derived from information on external debt.

¹¹Comprise use of International Monetary Fund resources under the General Resources Account, Trust Fund, and Poverty Reduction and Growth Facility (PRGF). For further detail, see Table 37.

¹²Net disbursement by commercial banks, based on directly reported flows and cross-border claims and liabilities reported in the International Banking section of the International Monetary Fund's International Statistics.

¹³This is often referred to as the "resource balance" and, with opposite sign, the "net resource transfer."

¹⁴Net external financing plus amortization due on external debt.

¹⁵Net external borrowing plus amortization due on external debt.

¹In this table, official holdings of gold are valued at SDR 35 an ounce. This convention results in a marked underestimate of reserves for countries that have substantial gold holdings.

²Reserves at year-end in percent of imports of goods and services for the year indicated.

¹Debt-service payments refer to actual payments of interest on total debt plus actual amortization payments on long-term debt. The projections incorporate the impact of exceptional financing items.

²Total debt at year-end in percent of exports of goods and services in year indicated.

¹Excludes service payments to the International Monetary Fund.
²Interest payments on total debt and amortization on long-term debt. Estimates through 2001 reflect debt-service payments actually made. The estimates for 2002 and 2003 take into account projected exceptional financing items, including accumulation of arrears and rescheduling agreements. In some cases, amortization on account of debt-reduction operations is included.

Note: The estimates in this table are based on individual countries' national accounts and balance of payments statistics. For many countries, the estimates of national saving are built up from national accounts data on gross domestic investment and from balance-of-payments-based data on net foreign investment. The latter, which is equivalent to the current account balance, comprises three components: current transfers, net factor income, and the resource balance. The mixing of data sources, which is dictated by availability, implies that the estimates for national saving that are derived incorporate the statistical discrepancies. Furthermore, errors, omissions, and asymmetries in balance of payments statistics affect the estimates for net lending; at the global level, net lending, which in theory would be zero, equals the world current account discrepancy. Notwithstanding these statistical shortcomings, flow of funds estimates, such as those presented in this table, provide a useful framework for analyzing development in saving and investment, both over time and across regions and countries. Country group composites are weighted by GDP valued at purchasing power parities (PPPs) as a share of total world GDP.
