

Figure 3.5. Sectoral Shares of Value Added and Employment for Asia

(Percent, latest available year)

The share of industry in value added is higher than predicted in developing Asia, especially in ASEAN-4 (Indonesia, Malaysia, the Philippines, and Thailand) and China, reflecting strong productivity in this sector. On the other hand, the share of employment in agriculture is very high across developing Asia and much more so than predicted by fundamentals, suggesting low productivity in this sector. India stands out with a relatively high productivity in services.

Sources: World Bank, *World Development Indicators* (2006); and IMF staff calculations.

¹Based on a regression including initial income per capita, country size, and population. The predicted value is calculated as the difference between the actual share and the value of the dummy variable for the region/country.
